

# Standard Fan Control Unit

A range of standard control units use with any fans. Designed for fast, simple installation with standard operation by timeclock or advanced control by temperature and or humidity. The Standard Fan Control Unit range allows you and your installer to get your Ventilation system installed and operational in the fastest time with the lowest installed cost.

The Standard Control Panel has been designed to perfectly compliment your Hydor fan system. Offering fit and forget functionality so your fans come on when you need, leaving you to get on with the important jobs, knowing your livestock are happy.

The optional temperature and or humidity controller can operate your fans when the conditions of your livestock need it. This ensures your livestock are always comfortable while saving energy as your fans will only operate when needed.

To prevent a large start-up current overloading your electricity system, the Standard Fan Control Unit turns fans on sequentially.

## Features & Benefits

- Available in configurations of up to 12 HV fans.
- Control by timeclock or manually.
- Optional temperature and or humidity controller keeps your livestock at their optimum and reduces electricity consumption.
- Delayed sequential switching so fan unit start-up current doesn't overload your electrical system.
- IP54, perfect for all farm environments.
- 1-year warranty

# Standard Fan Control Unit
